Information Brochure

Hot Water - this is partially solar heated (via solar tubes on the top terrace) and part electric, rather than constantly using instant and on demand.

Electricity - we use a renewable wind energy supplier for our electricity, and have photovoltaic panels on the roof that generates electric for the grid.

Compost Loo - to recycle our humanure (without the vast waste and expense of energy, using drains, water and electricity in the usual flushing and extensive processing).

Heating - installed underfloor regulated heating throughout the building.

Recycling - we provide various bags, refuse bins and caddy's to separate recyclables, we compost all food waste onsite. **Glass is to be taken away by visitors to recycle.**

Ecological Products - are used in all our cleaning wherever possible.

We will continue to monitor our energy and water usage, purchase of consumables, research and learn about environmental problems and ways we can help solve them.
